

IN THE CLAIMS

Please amend the claims as follows:

1. (Currently Amended) A stretched film of a void-containing thermoplastic resin having an attractive force between sheets of the film, wherein the attractive force is 50 g or less, wherein the film surface has a charge potential, after discharging of the film, of -10 to 10 kV.

Claim 2. (Cancelled).

Claim 3. (Original) The stretched film of claim 1, having a rate of voids of 0.1 to 60%.

Claim 4. (Original) The stretched film of claim 1, having an opacity of 5 to 100%.

Claim 5. (Original) The stretched film of claim 1, wherein the thermoplastic resin is a polyolefin resin.

Claim 6. (Original) The stretched film of claim 1, containing an inorganic fine powder and/or an organic filler.

Claim 7. (Original) The stretched film of claim 6, containing 0.1 to 65 wt % of the inorganic fine powder and/or the organic filler.

Claim 8. (Original) The stretched film of claim 1, wherein the film is stretched in at least one direction.

Claim 9. (Original) The stretched film of claim 1, wherein at least one layer constituting the stretched film of void-containing thermoplastic resin contains an antistatic agent.

Claim 10. (Currently Amended) An in-mold-forming label, comprising the stretched film of void-containing thermoplastic resin having an attractive force between sheets of the film, wherein the attractive force is 50 g or less, wherein the film surface has a charge potential, after discharging of the film, of -10 to 10 kV.

Claim 11. (Original) A resin container on which is adhered an in-mold-forming label comprising the stretched film of void-containing thermoplastic resin having an attractive force between sheets of the film, wherein the attractive force is 50 g or less, wherein the film surface has a charge potential, after discharging of the film, of -10 to 10 kV.

Claims 12-14 (Cancelled).
